DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: page 11, line 1, “..” should be corrected as -- . --. Appropriate correction is required.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang [US 6,195,254] in view of Japan 2000-91039.

Regarding claim 1, Chang discloses a flexible substrate (22) comprising a connector (13) having a plurality of terminals (figure 4) connected to a plurality of wirings (column 2, lines 30-45).

Chang discloses the instant claimed invention except for a shorting wiring interconnected for connecting to one of the plural electrically conducting terminal in the connector and for shorting to the other electrically conducting terminals.

Japan 2000-91039 discloses an adapter device/shorting wirings for generating discriminating display information for connecting a display device by selectively connecting terminals of a display connector (see abstract).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the display connection technique of Japan 2000-91039 with the connector of Chang, for the purpose of enabling and controlling connection of display devices of different manufacturers.

Regarding claim 2, Japan 2000-91039 further discloses connection pins being used for the selected connections (figure 3).

It would have been obvious to one of ordinary skill in the art at the time the invention was made that holes cooperating with pins could have been used for the connections for the purpose of providing solderless connection.

Regarding claims 3-6, Chang in view of Japan 2000-91039 disclose the instant claimed invention except for the specific interconnections.

It would have been obvious to one of ordinary skill in the art at the time the invention was made that various interconnections would have been able to be used in order to accommodate various display types.

Regarding claim 7, Japan 2000-91039 further discloses a circuit (10) to provide information to set the resolution and a sensor signal for the display.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the circuit of Japan 2000-91039 in Chang in order to provide appropriate signal information to the display type used.

Regarding claim 8, Chang discloses the use of a second connector on the display means (figure 2).
